

[< Previous](#)[Next >](#)

Shortly after the “Data Replication Progress” column reaches 100%, it transitions to *Continuous Data Protection* and a purple launch icon is lit in the “Status” column.

Once a machine is marked with a purple launch icon, you can spin up its replica in the target location by clicking the “Test” button.

Please contact [support@cloudendure.com](mailto:support@cloudendure.com) if the “Data Replication Progress” column shows no progress for a long time.

By default, all replicas are created as c3.large instances in the same new subnet in a VPC in the target location (CloudEndure creates that VPC and the subnet for you).

A random private IP in the subnet is attached to each replica.

**All these defaults can be overridden.**
