

[< Previous](#)[Next >](#)

Within your CloudEndure console, modify the machine blueprint for each server.

You may change these properties at any time after the agent is installed (you don't have to wait for replication to complete to modify these settings).

These properties include the desired target instance types, storage device types, and networking configuration based on the subnet IDs defined in [step #5](#). You may automate this process using CloudEndure's REST API access.
