For complete installation instructions, please refer to the appropriate CloudEndure agent installation guide:

- [Windows](#)

- [Linux](#)

After successfully installing agent, please make sure that the replication progress of the server displayed under the 'Data Replication Progress' within CloudEndure's console advances. If the 'Status' column show a red icon, this usually means that connectivity issues are experienced, either in the subnet designated for the replication servers or on the source machine. In this case, ensure that the networking prerequisites are met, or contact support@cloudendure.com for additional assistance.
